

HOW TO APPROACH CASE STUDIES

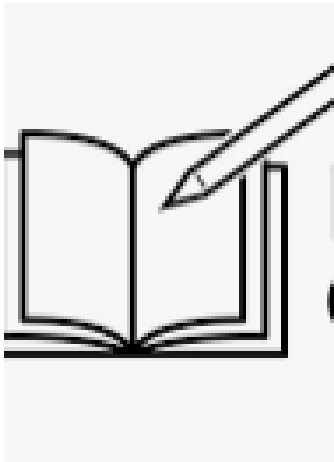

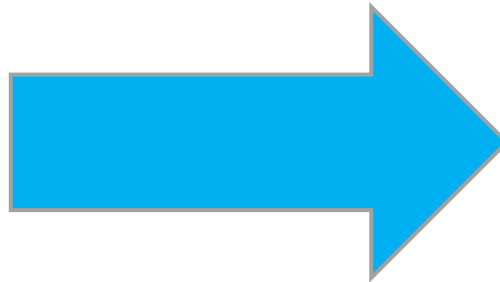

Problem/ Situational Analysis

Step 1: Understand the problem situation based on the information available.

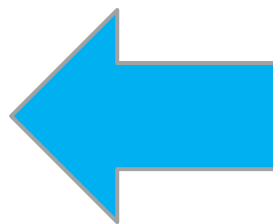

Step 4: Develop clear criteria for evaluating options available

Step 2: Define the problem clearly

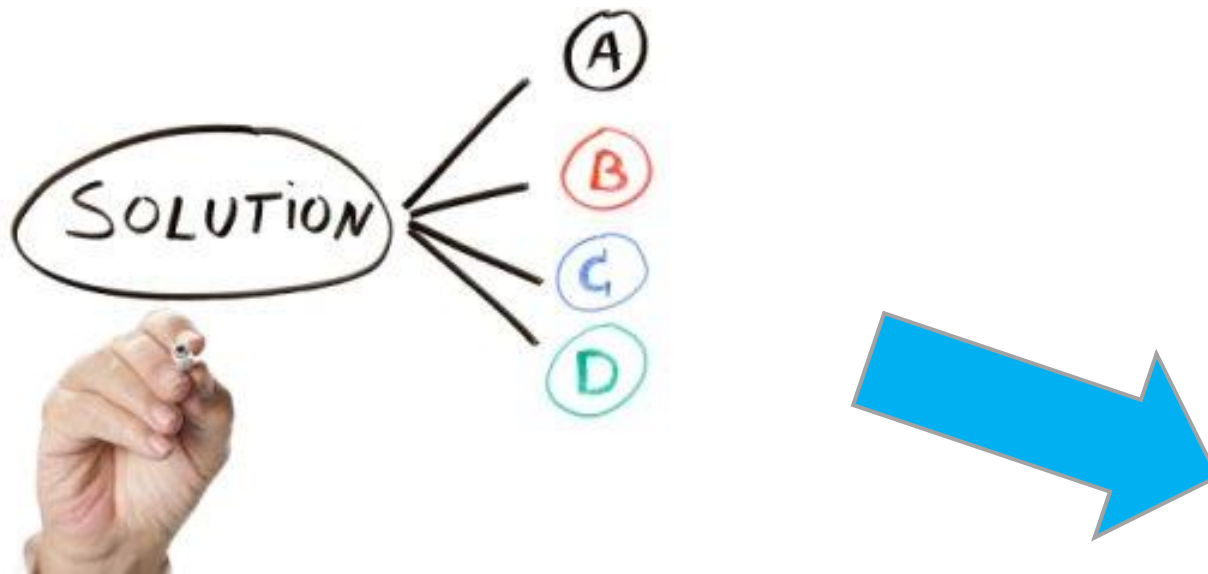

Step 3: Analyze the problem using various tools. Data collection and clearing objectives (both short term and long term)

Swipe

Decision Making

Step 5: Generate alternative options available to address the problem, taking into account the constraints of the situation.

Step 6: Evaluate the options based on developed criteria

Step 7: Choose the best option so as to arrive at specific decisions

Implementation

Step 8: Work out a clear plan for implementation. It requires effective communication of plans, information and other managerial processes in both written as well as oral media.

Contingency Plan

Step 9: Develop contingency plans as appropriate. It is necessary to identify possible weak links in the action and implementation plan and develop alternative or backup plans that will be put into play if required.
